

# VERIFICATION

## DEFINITION (simplified):

Verification is the process of examining and testing a measuring instrument to ensure it complies with legal requirements (to ensure it is functioning and working correctly prior to being used for the sale of goods).

Verification is conducted when measuring instruments are used for:

-  The protection of people
-  The protection of the environment
-  The protection of fair trade activities

Benefits of an effective verification process:

-  Accurate measuring instruments
-  Increased consumer confidence
-  Compliance guaranteed
-  Improved customer service
